

UX-001 - Syrka Product Experience Architecture

Status: Constitutional Product Specification

Version: 1.0

Date: 2026-07-08

Builds upon: Product Suite; ADR-001 - Open Source LMS Foundation; ADR-002 - Domain Architecture & Bounded Contexts; CEA-001 - Canonical Event Architecture; ONT-001 - Ontology Constitution; GRAPH-001 - Human Capability Graph Specification; REASON-001 - Evidence & Reasoning Constitution; INF-001 - Capability Inference Constitution

Decision owners: Product / UX Architecture / Design / Frontend Engineering / Platform Architecture

Scope: User roles, application hierarchy, navigation, workflows, information architecture, permissions, dashboards, interactions, MVP scope, Figma readiness, Google Stitch prompts, Claude implementation guidance, diagrams, and appendices

1. Executive Overview

Syrka is not an LMS, portfolio site, LinkedIn clone, job board, or course marketplace. Syrka is an AI-powered Human Capability Platform. Its product experience must constantly reinforce one question:

> What can I become, and what evidence supports that journey?

UX is separated from implementation because the interface must express Syrka's ontology and reasoning model regardless of frontend framework, backend service, LMS provider, AI model, or database. Next.js routes, Supabase tables, graph queries, and Open edX adapters may evolve; the product experience architecture remains stable.

The product experience reflects the ontology by treating concepts as user-facing information architecture:

- Capability becomes dashboard cards, profile claims, passport entries, and opportunity requirements.
- Evidence becomes evidence timelines, artifact cards, assessment details, and verification trails.
- Confidence becomes visible confidence meters with explanation, not hidden scores.
- Provenance becomes source labels, event history, review history, and trust indicators.
- Career intent becomes Odyssey goals, pathways, preferences, and recommendation constraints.
- Ontology relationships become learning pathways, capability gaps, transfer maps, and career routes.

UX reinforces trust in AI by never presenting AI as magic. AI should be calm, specific, evidence-backed, and inspectable. Every recommendation must expose why it was made, which evidence was used, which uncertainty remains, and what the user can do next.

Product tone:

- intelligent
- calm
- premium
- explainable
- evidence-driven
- minimal
- enterprise-grade
- accessible

- global

2. User Personas

| Persona | Goals | Needs | Permissions | Primary workflows | Success metrics | Pain points |

|---|---|---|---|---|---|---|

| Student | Understand capabilities, improve, build passport, find opportunities. | Clear roadmap, evidence, feedback, privacy control. | Own profile/evidence/passport; view courses/recommendations; share selectively. | onboarding, learning, evidence review, Odyssey, portfolio, passport, apply. | capability growth, completed actions, opportunities matched, passport shares. | confusion about what matters, opaque AI, scattered evidence. |

| Faculty | Teach, assess, monitor students, verify evidence, improve curriculum. | Cohort insights, rubrics, capability review, interventions. | Course/cohort access; review assigned evidence; curriculum mappings. | course management, student monitoring, evidence verification, feedback. | student progress, intervention resolution, assessment quality. | dashboard overload, manual review burden, unclear capability mapping. |

| University Administrator | Improve outcomes, align curriculum, monitor institution. | Program analytics, employability data, accreditation support. | Institution-wide aggregates; admin configuration; no unnecessary PII. | analytics, curriculum mapping, reports, settings. | outcome improvement, gap closure, employer alignment. | fragmented systems, weak labour-market visibility. |

| Employer | Find capability-fit candidates and verify claims. | Trustworthy search, passport verification, hiring pipeline. | Employer profile/jobs; view shared profiles/passports; contact candidates. | onboarding, role creation, candidate matching, evidence review, pipeline. | matches reviewed, interviews, hires, reduced screening time. | unreliable resumes, skills inflation, poor signal quality. |

| Government Analyst | Understand workforce gaps, national priorities, mobility corridors. | National dashboards, forecasts, policy insights, cohort mobility. | Aggregated/anonymized data; corridor analytics; policy overlays. | labour analytics, capability gaps, strategic sector views, mobility planning. | policy decisions supported, gap reduction, corridor outcomes. | stale statistics, inconsistent education data. |

| Researcher | Showcase research capability and find collaboration. | Publication mapping, evidence trails, collaboration matches. | Own research profile; institution/research data depending role. | link ORCID/research, review mappings, collaboration recommendations. | collaborations, grants, research impact signals. | attribution ambiguity, disconnected research systems. |

| Mentor | Guide learners using evidence and goals. | Learner roadmap, safe notes, recommendations, progress. | Access only assigned mentees and consented data. | review learner, suggest actions, track progress. | mentee progress, action completion. | too much data, unclear next best step. |

| Parent (future) | Support learner progress where legally appropriate. | High-level progress, wellbeing signals, consented visibility. | Minor/guardian-scoped access only. | view progress, support actions, notifications. | engagement, learner support. | privacy boundaries, over-surveillance risk. |

| Career Advisor | Help students choose pathways and opportunities. | Capability gaps, market alignment, Odyssey plans. | Assigned students/cohorts; recommendations; notes. | advising session, pathway planning, opportunity matching. | successful pathway transitions, student satisfaction. | generic career advice, lack of evidence. |

| Recruiter | Source candidates and manage pipeline. | Search, filters, verified passports, communication. | Employer-scoped candidate data shared/authorized. | search, shortlist, verify, contact, pipeline. | qualified candidates, response rate, hire rate. | noisy applications, unverifiable claims. |

| System Administrator | Configure platform safely. | Tenant, integrations, roles, policies, observability. | Platform/institution admin scopes. | user management, integrations, policy config, audits. | uptime, configuration accuracy, incident resolution. | complex permissions, integration failures. |

- Analytics
- Integrations
- Audit logs
- Policy configuration

3.2 Product surfaces

| Surface | Primary roles | Purpose |

---|---|---

| Student app | Student, mentor, advisor | Personal growth, learning, capabilities, Odyssey, passport. |

| Faculty app | Faculty, advisor | Course/cohort monitoring, evidence review, interventions. |

| Employer app | Employer, recruiter | Job creation, search, passport verification, pipeline. |

| Government app | Government analyst | National/corridor analytics and policy insights. |

| Admin app | System/institution admin | Configuration, roles, integrations, audits. |

| Public profile | Student/employer/public viewer | User-controlled capability proof and portfolio sharing. |

4. Navigation Architecture

| Navigation layer | Design |

---|---

| Global navigation | Persistent role-aware sidebar on desktop; bottom tab/sheet on mobile. Shows Dashboard, Learning, Capability, Odyssey, Passport, Portfolio, Career, Settings. |

| Role-specific navigation | Employer sees Dashboard, Roles, Search, Pipeline, Analytics, Settings. Faculty sees Dashboard, Courses, Students, Evidence Review, Curriculum, Analytics. Government sees National Dashboard, Labour, Education, Corridors, Forecasts. |

| Context navigation | Within a course, show Overview, Modules, Assignments, Evidence, Analytics. Within a capability, show Evidence, Confidence, Related Skills, Opportunities. |

| Secondary navigation | Tabs inside major objects: overview, evidence, graph, recommendations, settings. |

| Breadcrumbs | Required for nested objects: Course -> Module -> Lesson -> Assignment. |

| Search | Global semantic search across courses, evidence, capabilities, opportunities, candidates, research. Scoped by role/permission. |

| Quick actions | Add evidence, update career intent, share passport, create job, review evidence, generate portfolio.

|

| Keyboard shortcuts | / search, g d dashboard, g c capabilities, g p passport, ? help. |

| Mobile navigation | Bottom nav with 4-5 primary items; overflow sheet for secondary sections. |

| Desktop navigation | Collapsible left sidebar + command palette. |

| Future tablet UX | Split-view navigation with graph/evidence side panels. |

5. Information Architecture

5.1 Screen specification matrix

Screen	Purpose	Primary info	Actions	AI interactions	Evidence/confidence/explanation	Related screens
Landing	Explain Syrka value by role.	product narrative, trust, role CTAs	request demo, sign in	none or guided demo	high-level examples only	Login, Register
Login/Register	Authenticate and capture consent.	auth form, SSO options	login, register, reset	none	consent links	Onboarding
Student Dashboard	Daily command center.	current capabilities, next actions, alerts	continue learning, update intent	explain recommendations	capability/evidence snippets	Capability, Odyssey, Passport
Course	Show course progress and evidence links.	modules, outcomes, assignments	continue, submit	study suggestions	outcome-to-capability mapping	Module, Assignment
Assignment	Complete and submit task.	instructions, rubric, due date	submit, request help	rubric clarification	evidence potential preview	Submission, Evidence
Evidence Timeline	Review evidence history.	events/artifacts/reviews	filter, dispute, add context	summarize evidence	evidence strength/confidence impact	Evidence Detail
Capability Dashboard	Show what person can credibly do.	capability cards, gaps, confidence	inspect, improve, dispute	explain capability	confidence + evidence	Capability Detail
Capability Detail	Explain one capability.	definition, evidence, graph paths	add evidence, dispute, share	explanation Q&A	full provenance	Evidence, Odyssey
Odyssey	Personal growth roadmap.	goals, pathway, milestones	accept plan, adjust goals	roadmap generation	evidence-backed recommendations	Career, Learning
Portfolio	Curated work proof.	projects, artifacts, reflections	generate, edit, share	draft descriptions	evidence-linked artifacts	Public Profile
Job Passport	Portable verified claims.	claims, credentials, share status	issue, update, share, revoke	claim explanation	verification trail/confidence	Passport Share
Employer Dashboard	Hiring command center.	roles, matches, pipeline	create role, review candidates	candidate insights	passport trust indicators	Search, Candidate
Candidate Profile	Evaluate candidate with consent.	capabilities, evidence, passport	shortlist, contact, verify	match explanation	evidence trail	Pipeline
Faculty Dashboard	Monitor courses/cohorts.	risk, mastery, evidence reviews	intervene, review	cohort insights	evidence awaiting review	Student Detail
Government Dashboard	National intelligence.	gaps, sectors, forecasts	filter, export, drilldown	policy insight summaries	aggregate confidence	Corridors, Forecasts
Settings	Control profile/privacy/integrations.	account, consent, integrations	update, revoke, connect	privacy guidance	consent evidence	Audit/Privacy
Admin Panel	Configure tenant.	users, roles, integrations	invite, configure, audit	none	audit trails	Institution Management

5.2 Notifications

Notifications must be actionable, explainable, and low-noise. Examples:

- Evidence reviewed.
- Capability confidence changed.
- Passport claim needs renewal.
- Employer viewed shared passport.

- Recommendation generated because a capability gap changed.
- Faculty intervention requested.
- Credential expiring.

6. Student Experience

6.1 Journey map

First login

- > Onboarding
- > Profile and career intent
- > Learning entry
- > Assignment/submission
- > Evidence timeline
- > Capability dashboard
- > Recommendations
- > Odyssey roadmap
- > Portfolio generation
- > Job Passport issue/share
- > Employment/opportunity workflow

6.2 Screens

| Stage | Screen | UX requirements |

|---|---|---|

- | First login | Welcome | Explain Syrka in one sentence; ask role/goal; avoid overwhelming graph terms. |
- | Onboarding | Profile setup | Collect programme, interests, goals, privacy preferences, integrations. |
- | Profile | Capability profile | Show identity, education, career intent, evidence connections. |
- | Learning | Course/module/lesson | LMS content can be embedded/linked but Syrka layer shows capability relevance. |
- | Assignments | Assignment/submission | Show rubric, due date, expected evidence, capability impact. |
- | Evidence | Evidence timeline/detail | Let student inspect, annotate, dispute, and understand evidence strength. |
- | Capability | Dashboard/detail/graph | Capability cards show confidence, evidence count, freshness, next step. |
- | Recommendations | Recommendation detail | Every recommendation says why, evidence used, and expected impact. |
- | Odyssey | Roadmap | Goal-driven pathway with milestones and confidence improvement targets. |
- | Portfolio | Project/artifact builder | Evidence-backed portfolio, not free-form bragging. |
- | Job Passport | Passport overview/share | User controls disclosure; claims are explainable. |
- | Employment | Opportunity/apply | Match score, capability fit, gaps, share passport option. |

7. Faculty Experience

| Area | Required UX |

|---|---|

- | Course management | Course overview, modules, outcomes, assessments, capability mappings. |
- | Student monitoring | Cohort table with risk, mastery, missing evidence, recent activity. |
- | Capability review | Review evidence packet, ontology mapping, confidence suggestion, approve/downgrade/reject. |
- | Evidence verification | Verify artifacts, rubrics, submissions, authenticity, and feedback. |
- | Recommendations | Suggested interventions and next learning actions. |
- | Curriculum mapping | Map outcomes/assessments to capabilities and labour-market/national priorities. |
- | Analytics | Assessment quality, capability coverage, gap trends. |
- | Feedback | Structured feedback that can become evidence. |
- | Assessment | Rubric builder aligned to ontology concepts. |

Faculty UX must reduce review burden. Use queues, batch review, confidence filters, and evidence

summaries, but always allow full evidence inspection.

8. Employer Experience

Area	Required UX
Employer onboarding	Company verification, domains, hiring goals, data/privacy agreement.
Company profile	Employer brand, sectors, roles, verified status.
Role creation	Define job requirements using capability ontology, not only keywords.
Capability search	Search candidates by capabilities, confidence, evidence freshness, availability, location.
Student matching	Match explanations: required capabilities met/missing, evidence sources.
Evidence review	Passport/evidence viewer with redaction and consent boundaries.
Passport verification	Verify claims, credentials, provenance, expiry, and share permissions.
Hiring pipeline	Shortlist, contact, interview, offer, feedback.
Analytics	Role funnel, match quality, capability supply, hiring outcomes.
Communication	Consent-aware messaging and status updates.

Employer UX must feel more trustworthy than a resume database. Every candidate claim shown to employers must be consented, evidence-backed, and explainable.

9. Government Experience

Area	Required UX
National dashboards	Capability supply, demand, education alignment, mobility readiness.
Labour analytics	Skill/capability demand, salary, vacancy, growth, AI displacement.
Capability gaps	National, sector, region, institution, and programme-level gaps.
Education analytics	Curriculum alignment, graduate readiness, institutional outcomes.
Strategic sectors	National priority sector capability pipelines.
Mobility corridors	Corridor readiness, supply/demand, credential gaps, approvals.
Policy insights	Explainable policy briefs, data sources, confidence, limitations.
Forecasts	Scenario modelling and uncertainty bands.

Government UX must default to aggregate and privacy-preserving views. Individual-level views require explicit legal basis and strict audit.

10. Dashboard Architecture

Dashboard	Widgets/cards	KPIs	Alerts	Actions
Student	capability summary, Odyssey next step, evidence timeline, passport status, opportunities	confidence growth, evidence freshness, roadmap progress	expiring credential, review needed	continue learning, add evidence, share passport
Faculty	cohort mastery, risk list, review queue, assessment quality, curriculum coverage	review backlog, mastery distribution, intervention success	high-risk students, unmapped assessment	review evidence, intervene, map outcome
Employer	open roles, candidate matches, pipeline, passport verifications	match quality, shortlist rate, time-to-review	candidate response, expiring role	create role, search, verify
Government	capability supply/demand, sector gaps, corridor readiness, forecasts	gap index, readiness, demand growth	strategic gap, credential bottleneck	drill down, export, scenario
Administrator	users, integrations, roles, audit, system health	active users, sync status, errors	failed integration, policy breach	configure, invite, audit
Researcher	publications, capability map, collaboration suggestions, impact signals	mapped outputs, collaboration fit	unmapped publication	connect ORCID, review mapping
Mentor	mentee progress, next actions, capability gaps, notes	action completion, progress velocity	stalled	

mentee | suggest action, schedule |

Profile --> Collaborations[See collaboration recommendations]
Collaborations --> Share[Share portfolio/passport]

13. AI Interaction Design

Topic	Rule
How AI appears	As explainable assistants, inline summaries, recommendation rationale, evidence analysis, and roadmap suggestions.
When AI speaks	When it can cite evidence, explain uncertainty, and propose an action.
When AI remains silent	When evidence is insufficient, privacy is unclear, or answer would be speculative/high-impact without review.
Explainability UX	Always show "Why?" and "Evidence" affordances near recommendations and capability claims.
Confidence UX	Use bands and plain-language labels; avoid false precision as primary display.
Evidence UX	Evidence cards show source, date, type, strength, confidence impact, and provenance.
Recommendation UX	Recommendation cards include reason, expected impact, effort, confidence, and alternatives.
Conversation UX	AI chat is scoped to current context and cannot invent claims. It should say when evidence is missing.
Inline suggestions	Use subtle cards/chips, not intrusive modals.
Feedback collection	Users can mark useful/not useful, dispute, add context, or request human review.
Trust indicators	Verified, human-reviewed, AI-assisted, stale, disputed, revoked, and jurisdiction-specific badges.

AI must never appear magical. It should behave like an evidence-aware guide.

14. Design Principles

Principle	Specification
Typography	Modern, readable, premium; generous line height; tabular numerals for metrics.
Spacing	Calm spacing, strong grouping, avoid dense admin clutter on student surfaces.
Information density	Progressive disclosure: summary -> explanation -> evidence -> provenance.
Color	Neutral enterprise palette; accent colors for capability, evidence, confidence, risk. Avoid red/green-only meaning.
Accessibility	WCAG AA baseline; semantic HTML; visible focus; screen reader labels.
Motion	Subtle and purposeful; no distracting animation in analytical views.
Loading states	Skeletons for cards/tables; explicit AI processing states with cancel/retry.
Error states	Explain what failed, why it matters, and how to recover.
Empty states	Teach next action and explain why data is missing.
Micro-interactions	Evidence expand, confidence tooltip, copy/share, save filters.
Dark mode	Premium dark mode for dashboards; preserve contrast and chart readability.
Light mode	Default for institutional and student use.
Enterprise appearance	Trustworthy, restrained, data-rich but not cluttered.

15. MVP vs Future

Feature area	MVP	Version 2	Version 3	Long-term vision
Student dashboard	Capability summary, next actions, evidence timeline	graph explorer	personalized AI coach	lifelong capability OS

| Learning | course/assignment views via LMS adapter | richer embedded learning | adaptive learning | full Syrka-native learning runtime |

| Evidence | timeline, detail, dispute | evidence explorer | advanced provenance graph | personal evidence vault |

| Capability | cards/detail/confidence | interactive graph | simulations/what-if | dynamic human capability twin |

| Odyssey | roadmap and recommendations | multi-path planning | collaborative mentoring | autonomous career navigation |

| Passport | issue/share/verify | VC export | cross-border credentials | global mobility passport |

| Employer | role creation/search/profile | ATS integrations | talent communities | capability marketplace |

| Faculty | cohort dashboard/review queue | rubric builder | AI curriculum copilot | capability-driven teaching OS |

| Government | national dashboards/scenarios | corridor console | policy simulation | real-time workforce operating system |

| Research | basic publication mapping | collaboration engine | grant matching | research capability network |

| Mobile | responsive web | native companion | offline evidence capture | mobile-first passport wallet |

MVP must focus on: student capability dashboard, evidence, Odyssey, passport, faculty review, employer matching, and government/institution dashboards already aligned with the current app direction.

16. Component Inventory

| Component | Purpose | Key states |

---|---|---

| Navigation Sidebar | Role-aware primary navigation. | expanded/collapsed/mobile. |

| Top Bar | Search, notifications, profile, quick actions. | default/search active. |

| Card | Generic content container. | default/loading/error/empty. |

| Capability Card | Display capability, confidence, evidence count, freshness, next action. | emerging/supported/strong/verified/stale/disputed. |

| Evidence Card | Show evidence source, type, date, strength, provenance. | verified/reviewed/AI-assisted/revoked/expired. |

| Recommendation Card | Explain action suggestion. | accepted/rejected/saved/completed. |

| Passport Card | Show claim or credential in passport. | included/shareable/expired/revoked/private. |

| Timeline | Chronological evidence/capability history. | filtered/grouped. |

| Graph Viewer | Explore capability/evidence/ontology paths. | overview/focused/path explanation. |

| Confidence Meter | Human-readable confidence display. | banded with explanation. |

| Evidence Explorer | Filter/search evidence and provenance. | table/card/graph modes. |

| Search | Semantic global search. | command palette/inline. |

| Filters | Narrow lists by role-relevant dimensions. | saved/temporary. |

| Tables | Enterprise data display. | sortable/filterable/exportable. |

| Forms | Data entry with validation. | dirty/saved/error. |

| Charts | KPI and trends. | accessible legends/tooltips. |

| Badges | Status/trust indicators. | verified/stale/disputed/revoked. |

| Tags | Ontology labels and filters. | selected/unselected. |

| Progress Bars | Roadmap and completion. | percentage/milestone. |

| Notifications | Actionable alerts. | unread/read/resolved. |

| Dialogs | Focused decisions. | confirm/cancel/destructive. |

| Explainability Drawer | Side panel for why/how. | evidence/confidence/provenance tabs. |

17. Accessibility

| Requirement | Design rule |

---|---

| WCAG AA | Minimum contrast, keyboard access, semantic structure. |

| Keyboard navigation | All navigation, filters, dialogs, and graph lists accessible by keyboard. |

| Screen readers | ARIA labels for charts, confidence meters, graph paths, badges. |

| High contrast | Dedicated high-contrast tokens. |

Reduced motion	Respect OS preference and disable nonessential motion.
Localization	All text externalized; avoid hardcoded date/number formats.
RTL support	Layout mirrors for Arabic and other RTL languages.
Low-bandwidth mode	Disable heavy graph animations, lazy-load charts, compressed evidence previews.

18. Mobile Experience

Area	Strategy
Native app strategy	Start responsive web/PWA; native companion when passport/evidence wallet and push notifications mature.
Responsive layouts	Cards stack; tables become lists; graph becomes focused path viewer.
Offline capability	Future: offline passport, saved roadmap, evidence capture drafts.
Push notifications	Credential expiry, employer interest, review completed, roadmap reminders.
Quick actions	share passport, scan/upload evidence, update goal, view next step.
Gesture support	swipe cards only for low-risk actions; destructive actions require confirmation.

20. Google Stitch Readiness

Production-ready prompts:

| Target | Prompt |

---|---

| Landing Page | Design a premium, calm landing page for Syrka, an AI-powered Human Capability Platform. Emphasize evidence-backed capability, explainable AI, Job Passport, employers, universities, and governments. Use minimal enterprise layout, strong typography, role CTAs, and trust indicators. |

| Student Dashboard | Create a student dashboard showing capability summary, Odyssey next steps, recent evidence, recommendations, Job Passport status, and opportunities. Every AI recommendation has a visible Why/Evidence affordance. Calm premium UI, no clutter. |

| Faculty Dashboard | Create a faculty dashboard with cohort mastery, review queue, risk alerts, assessment quality, curriculum coverage, and intervention actions. Enterprise-grade, evidence-focused, with filters and clear review cards. |

| Employer Dashboard | Create an employer dashboard for capability-based hiring: roles, matches, passport verifications, pipeline, and analytics. Candidate cards show verified capabilities, confidence bands, evidence count, and consent status. |

| Government Dashboard | Create a national workforce dashboard showing strategic sectors, capability gaps, labour demand, education alignment, mobility corridor readiness, and forecast cards. Use aggregate privacy-preserving design. |

| Capability Screen | Create a capability detail screen with definition, confidence meter, evidence timeline, graph path, supporting and conflicting evidence, recommendations, and explanation drawer. |

| Odyssey | Create a personal career Odyssey roadmap showing goals, milestones, learning actions, opportunity actions, confidence gains, and adjustable career intent. |

| Job Passport | Create a Job Passport screen with verified claims, credentials, evidence trails, sharing controls, expiry warnings, and public preview. |

| Portfolio | Create an evidence-backed portfolio builder with projects, artifacts, reflections, publications, generated narrative, and share controls. |

| Profile | Create a profile screen with identity, career intent, integrations, education, capabilities summary, privacy controls, and public profile preview. |

| Settings | Create settings for account, privacy/consent, integrations, notifications, security, language, accessibility, and data export. |

| Navigation | Create role-aware navigation for student/faculty/employer/government/admin with sidebar desktop and bottom navigation mobile. |

21. Claude Readiness

21.1 Implementation map

| Screen | React components | Next.js route | API | Supabase tables/projections | Events | Ontology concepts | Graph queries |

|---|---|---|---|---|---|---|

21.2 Engineering guidance

- Keep UI components domain-aware but not business-rule owners.
- Fetch projections through APIs; never query LMS databases from frontend.
- Every AI/recommendation card must include an explanation affordance.
- Use TypeScript types for ontology/event/graph concepts.
- Treat PDF/exports as generated artifacts; source of truth remains markdown/spec/API data.
- Respect country route segment for jurisdiction-specific overlays.

23. Appendices

Appendix A - Navigation matrix

Role	Primary nav	Secondary nav
Student	Dashboard, Learning, Evidence, Capability, Odyssey, Passport, Portfolio, Career	Settings, Integrations, Notifications
Faculty	Dashboard, Courses, Students, Evidence Review, Curriculum, Analytics	Settings, Notifications
Employer	Dashboard, Roles, Search, Candidates, Pipeline, Analytics	Company, Settings
Government	National Dashboard, Labour, Education, Sectors, Corridors, Forecasts	Exports, Settings
Admin	Admin, Institutions, Users, Roles, Integrations, Audit	Policies, System Health

Appendix B - Permission matrix

Action	Student	Faculty	Employer	Government	Admin
View own evidence	yes	assigned only	shared only	no individual by default	policy-bound
Dispute own evidence	yes	no	no	no	policy-bound
Review student evidence	no	assigned	no	no	policy-bound
Search candidates	no	no	consented pool	aggregate only	policy-bound
View passport	own/shared	assigned/shared	shared	aggregate/authorized	policy-bound
Export reports	own	course/cohort	employer	aggregate	yes
Configure tenant	no	no	employer profile only	no	yes

Appendix C - Interaction patterns

- Progressive disclosure: summary, detail, evidence, provenance.

- Confidence bands over raw scores unless detail view.
- Explanations in side drawers to avoid page clutter.
- Empty states teach evidence collection.
- Disputes and appeals are always visible where claims affect user opportunity.
- Role-specific language avoids internal architecture terms.

Appendix D - Design glossary

Term	UX meaning
Capability Card	Summary of evidence-backed ability.
Evidence Trail	Chronological/provenance path for a claim.
Odyssey	Personalized roadmap from current capability to desired future.
Passport Claim	Shareable verified capability/credential claim.
Confidence Band	Human-readable support level.
Explanation Drawer	Inspectable AI/evidence reasoning panel.

Appendix E - Future features

- Native mobile passport wallet.
- Voice-first mentor assistant.
- Interactive graph simulations.
- Cross-border corridor operations console.
- Credential issuer portal.
- Parent/guardian experience.
- Advanced team/project collaboration.
- Institutional accreditation package generator.
- Employer ATS plugin.
- Public capability profile SEO pages.

Appendix F - Implementation notes

- Current repository already uses country-scoped routes for student, faculty, employer, ministry, and university surfaces; preserve this pattern for jurisdiction overlays.
- Use API route boundaries for domain projections.
- Add route groups by product surface as the app grows.
- Prefer reusable components in components/ or packages/ui as architecture matures.
- Never expose Open edX-native terminology unless inside learning adapter admin screens.
- Use canonical concepts in copy: capability, evidence, confidence, passport, Odyssey, opportunity.

24. Final Decision

UX-001 establishes Syrka's product experience architecture. Every future Figma design, Google Stitch prototype, Claude implementation, frontend route, dashboard, and product workflow must reinforce Syrka as an AI-powered Human Capability Platform.

The interface must keep the MVP focused while allowing long-term expansion. Every screen must reflect ontology, every capability must be evidence-backed, every recommendation must be explainable, and every role must navigate complexity through calm, trusted, purposeful product structure rather than conventional LMS clutter.
